

UPGRADE PACKAGE

*****READ FIRST*****

UPGRADE INSTALLATION NOTES

All work associated with upgrading controls should only be performed by an experienced service technician familiar with this type of equipment. It is highly recommended that technicians receive prior training on controls and upgrades.

Note that this package is not a point-for-point, drop-in replacement. The wiring indicated in this drawing set is generic and intended to show all possible terminations. This is a system upgrade and it is critical that the installing technician thoroughly review and fully understand the scope of work prior to beginning.

- Prior to performing the upgrade:
 - **REVIEW THIS PACKAGE:** Review the attached wiring details and compare to the original factory wiring diagrams (Originals can be found inside unit or contact your AAON rep).
 - **SAVE EXISTING CONFIGURATION INFORMATION:** When possible, save the setpoint and configuration information from the original controller. To do this, connect to the existing controller with one of the interface methods listed below. Then, manually transfer the data to paper. To help with the process, there are interactive and manual setpoint worksheets available on our website at www.aaon.com/library/category/controls for most of our legacy controllers.
 - PLEASE NOTE: Without the setpoint and configuration information for a specific unit, AAON Controls Support cannot walk you through the configuration of that unit as we have no way of knowing how the unit was originally configured.
 - **DETERMINE INTERFACE METHOD:** Determine which method you will be using to interface to the controls to configure the unit once the wiring modifications have been made. The VCCX2 Controller requires one of the following methods for configuration:
 - USB-Link2 – Part# ASM02244 (plus computer with Prism2 software)
 - CommLink5 – Part# ASM01874 (plus computer with Prism2 software)
 - Modular Service Tool SD – Part# ASM01895 with firmware version 1.13 or higher
 - System Manager SD – Part# ASM01901 with firmware version 1.13 or higher (cannot be used to flash controllers or modules).
 - **FAMILIARIZE WITH THE UNIT BEING UPGRADED:** Examine the existing drawing to understand what features the unit has (Hot Gas Reheat, Number of Compressors, Compressor Types, Head Pressure Control, etc.). This information will be helpful in understanding how to connect the new controls.

CONFIRM NETWORKED SYSTEMS: If the unit is part of an existing networked system or is connected to an existing System Manager, additional parts may be required to communicate with legacy equipment or legacy equipment may need to be replaced or upgraded. These additional items are not included in the upgrade package.

REMOTE FORCED HEATING	EXP B15	B16		
REMOTE FORCED COOLING	EXP B16	B15		
EXHAUST HOOD ON	EXP B17	B13		
REMOTE FORCED DEHUMIDIFICATION	EXP B18	B17		
DUCT STATIC PRESSURE	R122	R122	DEDICATED R122 CONNECTION. CAN BE USED WITH SAME CONNECTION	

THIS PACKAGE IS NOT A POINT-FOR-POINT, DROP-IN REPLACEMENT.

USE THE CROSS REFERENCE TABLES TO DETERMINE WHERE TO LAND EXISTING WIRES ON NEW CONTROL BOARDS.

NOTE: IT IS RECOMMENDED TO USE WIRE LABELS BEFORE DISCONNECTING THE EXISTING WIRING. IT IS SUGGESTED TO USE THE POINT IDS IN THE COLUMN LABELLED "VCCX2". EXAMPLE:

FOR VCM-X, LABEL THE SUPPLY AIR TEMP "VCCX2 A13".

REFRIGERANT SYSTEM MODULE FOR DIGITAL COMPRESSORS WIRING

ASM02201 - RSMD FOR R410a
ASM01893 - RSMD FOR R22

UNITS WITH 2 DIGITAL AND 2 FIXED COMPRESSORS
THIS CONFIGURATION SHOULD BE SET UP WITH 1 DIGITAL AND 1 FIXED COMPRESSOR ON EACH RSMD. THE DIGITAL COMPRESSORS SHOULD BE WIRED AS THE #1 COMPRESSOR ON THE RSMD.

IF UNIT ALSO HAS HEAD PRESSURE CONTROL WITH ECM CONDENSER FANS, CONTACT THE AAON XTEND TEAM FOR GUIDANCE ON PAIRING CONDENSER FANS WITH APPROPRIATE RSM/COMPRESSOR.

UNITS WITH MULTIPLE RSMD BOARDS
EACH BOARD MUST HAVE A UNIQUE ADDRESS. REFERENCE SHEET 8 OF 8 FOR ADDRESSING INSTRUCTIONS

IF CONDENSER FAN MOTORS ORIGINALLY TERMINATED ON PWM TERMINALS OF HEAD PRESSURE CONTROLLER, A PWM CONTROLLER BOARD IS REQUIRED TO CONVERT 0-10VDC ANALOG OUTPUT TO PWM. REFER TO DETAIL ON SHEET 7 OF 8.

WATER SOURCE HEAT PUMPS
ON WATER SOURCE HEAT PUMPS, ANALOG OUTPUT "COND2" CONTROLS WATER SOURCE ECONOMIZER VALVE

*** USE BELOW AS A COMPLETION CHECKLIST ***

GENERAL

- EXISTING COOLING STAGES WILL BE MOVED FROM THE MAIN CONTROLLER TO THE RSMD(S).
- INSTALL SUCTION PRESSURE TRANSDUCER ON EACH RERFRIGERANT CIRCUIT AND WIRE TO EACH SUCTION PRESSURE INPUT. RE-USE EXISTING TRANSDUCERS AS NEEDED.
- WIRE 24VAC FROM CONTROL TRANSFORMER TO POWER RSMD BOARD.
- WIRE 24VAC FROM CSTB "R" TO "EMERGENCY SHUTDOWN" ON BINARY INPUT #4.
- WIRE 24VAC FROM CSTB "R" TO "COM" ON RELAY TERMINAL BLOCK (TB7).
- INSTALL "COMPRESSOR STATUS" FOR EACH COMPRESSOR ON BINARY INPUTS USING INCLUDED CURRENT SWITCHES.
- WIRE FROM RELAY OUTPUTS TO ENABLE COMPRESSOR CONTACTORS AS NEEDED. THIS MAY VARY BETWEEN EQUIPMENT.

FOR EACH DIGITAL COMPRESSOR

- MODULATION OF DIGITAL COMPRESSORS WILL BE PERFORMED BY THE RSMD(S).
- SEE "EXISTING COPELAND DIGITAL COMPRESSOR CONTROLLER" DETAIL INSET FOR ADDITIONAL INFORMATION.
- WIRE 24VAC FROM CSTB "R" TO MIDDLE STAKE-ON CONNECTOR FOR UNLOADER.
- WIRE FROM UNLOADER STAKE-ON CONNECTOR TO ONE SIDE OF SOLENOID.
- WIRE OTHER SIDE OF SOLENOID TO GROUND.
- WIRE COMPRESSOR DISCHARGE TEMPERATURE SENSORS TO RESPECTIVE TEMPERATURE INPUTS AND GROUND TERMINAL.
- DISCONNECT WIRES FROM M1 & L1 TERMINALS OF COPELAND BOARD AND SPLICE TOGETHER.
- REMOVE EXISTING COPELAND BOARD.

UNITS WITH HEAD PRESSURE CONTROL

- HEAD PRESSURE CONTROL WILL BE PERFORMED BY THE RSMD(S).
- COMPLETE THE CHECK-BOXES BELOW ONLY IF THE UNIT BEING UPGRADED HAS HEAD PRESSURE CONTROL.
- WIRE EACH HEAD PRESSURE TRANSDUCER TO RESPECTIVE INPUT ON NEW RSM.
- WIRE ANALOG OUTPUTS TO CONDENSER FAN MOTORS AS SHOWN.
- REMOVE EXISTING HEAD PRESSURE MODULE.

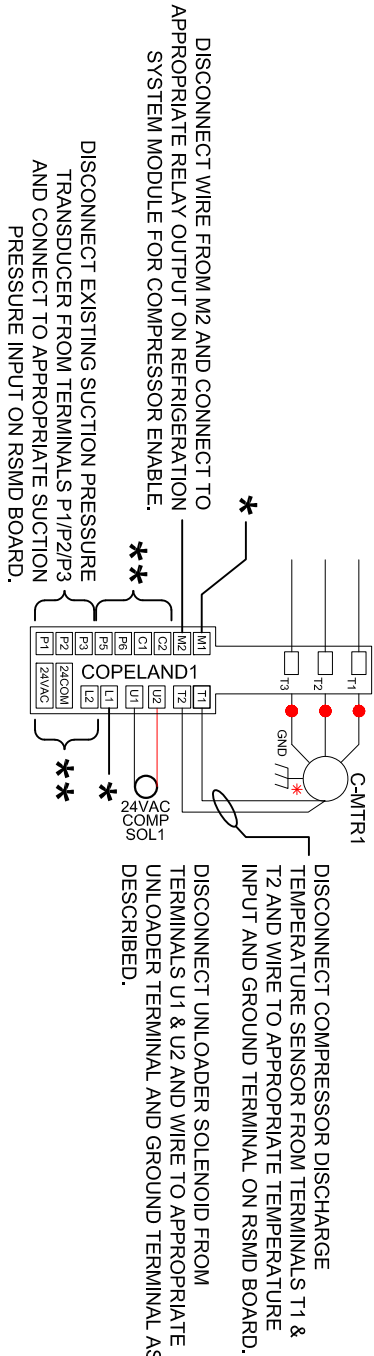

HEAT PUMP UNITS

- COMPLETE THE CHECK-BOXES BELOW ONLY FOR HEAT PUMP UNITS.
- WIRE DEFROST TEMPERATURE SWITCHES IN PARALLEL TO B13 ON RSMD.
- WIRE REVERSING VALVE(S) TO RELAY OUTPUT #5 ON CORRESPONDING COMPRESSORS.
- EXISTING DEFROST CONTROL MODULE CAN BE REMOVED.

WATER SOURCE HEAT PUMP UNITS

- COMPLETE THE CHECK-BOXES BELOW ONLY FOR WATER SOURCE HEAT PUMP UNITS.
- WIRE PROOF OF WATER FLOW SWITCH TO B13 ON RSMD.
- WIRE LEAVING WATER TEMPERATURE SENSOR TO A13.
- IF APPLICABLE, WIRE WISE BYPASS VALVE TO ANALOG OUTPUT "COND2"

EXISTING COPELAND DIGITAL COMPRESSOR CONTROLLER

* REMOVE WIRES FROM L1 & M1 TERMINALS AND SPLICE TOGETHER.

** WIRES CONNECTED TO THE FOLLOWING TERMINALS ARE NOT REQUIRED AND CAN BE REMOVED: L2, P5, P6, C1, C2, 24VAC, 24COM.

INSTRUCTION ABOVE IS BASED ON L1 TERMINAL BEING WIRED TO GROUND FROM THE FACTORY. THERE HAVE BEEN SOME UNITS DISCOVERED IN THE FIELD WITH L1/L2 & M1/M2 SWAPPED. CONFIRM BEFORE MAKING FINAL TERMINATIONS.

COMMENTS: ORIGINAL DRAWING FILENAME: VCCX2 UPGRADE PACKAGE REV-D-DWG				SIZE PART OR DOCUMENT NUMBER D		REV D

REFRIGERANT SYSTEM MODULE FOR VFD COMPRESSORS WIRING

UNITS WITH MULTIPLE RSMV BOARDS
EACH BOARD MUST HAVE A UNIQUE ADDRESS. REFERENCE SHEET 8 OF 8 FOR ADDRESSING INSTRUCTIONS

USE BELOW AS A COMPLETION CHECKLIST

GENERAL

EXISTING COOLING STAGES WILL BE MOVED FROM THE MAIN CONTROLLER TO THE RSMV(S). MODULATION OF THE VFD'S WILL BE PERFORMED BY THE RSMV. FOR EACH RSMV, COMPLETE THE CHECK-BOXES BELOW.

- ☐ WIRE SUCTION PRESSURE TRANSDUCER TO SUCTION PRESSURE INPUT. RE-USE EXISTING TRANSDUCERS AS NEEDED.
- ☐ WIRE 24VAC FROM CONTROL TRANSFORMER TO POWER RSMV BOARD.
- ☐ WIRE 24VAC FROM C5TB "R" TO "COM" ON RELAY TERMINAL BLOCK (TBT).
- ☐ INSTALL "COMPRESSOR STATUS" FOR EACH COMPRESSOR ON BINARY INPUTS USING INCLUDED CURRENT SWITCHES.
- ☐ WIRE FROM RELAY OUTPUTS TO ENABLE COMPRESSOR CONTACTORS AS NEEDED. THIS MAY VARY BETWEEN EQUIPMENT.
- ☐ WIRE ANALOG OUTPUT #1 TO COMPRESSOR VARIABLE FREQUENCY DRIVE INPUT.

UNITS WITH HEAD PRESSURE CONTROL

HEAD PRESSURE CONTROL WILL BE PERFORMED BY THE RSMV(S).

COMPLETE THE CHECK-BOXES BELOW ONLY IF THE UNIT BEING UPGRADED HAS HEAD PRESSURE CONTROL.

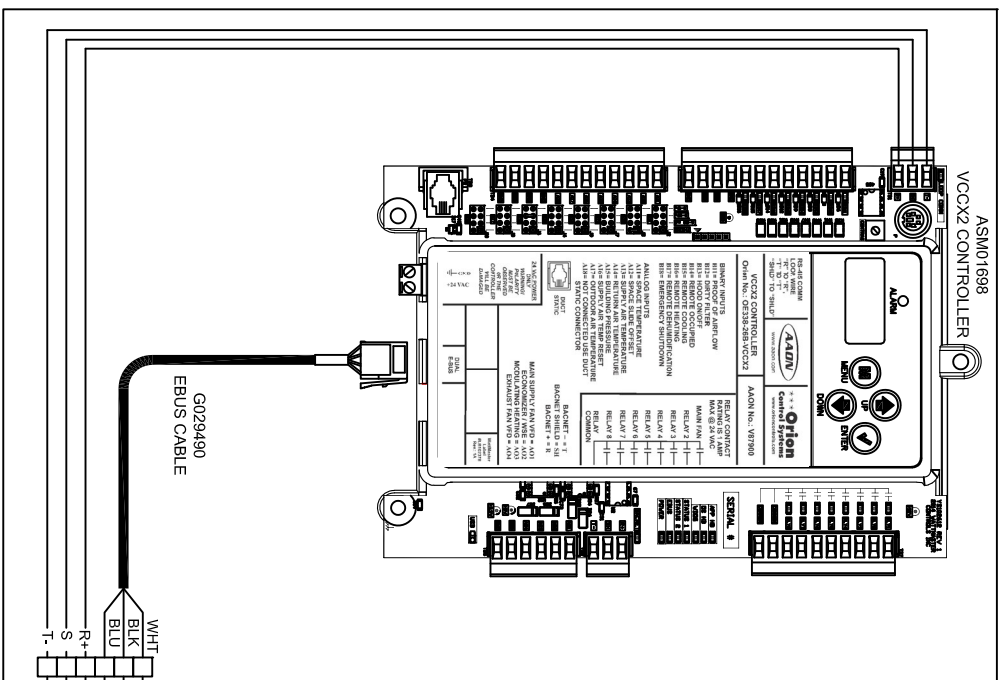

- ☐ WIRE HEAD PRESSURE TRANSDUCER TO HEAD PRESSURE INPUT.
- ☐ WIRE ANALOG OUTPUT #2 TO CONDENSER FAN MOTOR VARIABLE FREQUENCY DRIVE INPUT.
- ☐ REMOVE EXISTING HEAD PRESSURE MODULE.

FREQUENTLY ASKED QUESTIONS AND OTHER TIPS

VISIT THE CONTROLS SUPPORT WEBSITE FOR ADDITIONAL WIRING DETAILS, TECHNICAL GUIDES, SOFTWARE DOWNLOADS AND OTHER IMPORTANT INFORMATION:

www.aaon.com/library/category/controls

www.aaon.com/aaon-controls-technical-support

Frequently Asked Questions

The AAON unit does not have digital compressors. Why do I need a Refrigerant Module for Digital Compressors (RSM)?	
The AAON unit requires a Refrigeration System Module whenever it has digital compressors, dehumidification, head pressure control or if it is a heat pump unit.	
Instructions indicate a Suction Pressure Transducer on each circuit. Why did I receive only one new Suction Pressure Transducer in my Xtend package?	
Suction Pressure transducers are required on each compressor on units with RSM's. The intent is to re-use existing devices where possible and Xtend packages only include additional devices if needed. If another is needed, order part #ASM02771.	
My existing suction pressure transducer has a signal conditioner connected. Do I need to keep this connected?	
No. The existing transducer can be wired directly to the RSM and the signal conditioner can be removed.	
Do I need to remove the Copeland Digital Compressor Controller from the unit?	
It is not necessary to remove it. However, once the upgrade wiring is complete, there should be no wires landing on the Copeland controller so it is no longer needed and it is recommended to remove it. NOTE: Removing the Copeland Controller requires disconnect/reconnect of the compressor power wiring.	

Common alarms encountered when performing an Xtend upgrade

ALARM	PROBABLE ISSUE	DETAILS
MISSING HEAD PRESSURE	CONFIGURATION	RSM configuration defaults to head pressure control from the factory. Change condenser fan configuration to "ON/OFF".
EMERGENCY SHUTDOWN (VCCX2)	CONFIGURATION / WIRING	Wire 24VAC to BI-8 on the VCCX2 or change configuration to disable Emergency Shutdown.
EMERGENCY SHUTDOWN (RSM)	WIRING	Wire 24VAC to BI-4 on the RSM.
MISSING MODULE (VCCX2)	FIRMWARE UPDATE	Common on units that are re-using existing MODCAS-X or MHGRV-X modules. Existing modules need to have firmware updated to latest revision for VCCX2 to recognize.
MISSING COMPRESSOR DISCHARGE TEMPERATURE	WIRING	Digital compressors require a discharge temperature sensor to be wired to the temperature inputs on the RSM.
SAT FAIL (MHGRV-X)	CONFIGURATION	Confirm MHGRV-X is selected in the VCCX2 configuration.
COMP # FAIL (RSM)	WIRING	When the RSM starts a compressor, it must see positive run status within 45 seconds. Check installation of current switches to Binary Inputs on RSM.

ADDRESSING RSM/RSMD/RSMV MODULES

FROM 'MAIN' DISPLAY OF RSMD/RSMV MODULE, PRESS "ENTER" TWICE.
HOLD "UP" FOR 5 SECONDS.
PRESS "MENU" THREE TIMES.
PRESS "UP" OR "DOWN" TO SET ADDRESS.
PRESS "ENTER".
