\_\_\_\_\_

Engineer: \_\_\_\_\_ Contractor: \_\_\_\_\_

Service Contact: \_\_\_\_\_ Controls Contact : \_\_\_\_\_

Enter The Unit Tag Numbers For The HVAC Units
To Be Configured Per This Setpoint Worksheet:

Multiple horizontal lines for entering unit tag numbers.

**Configuration Screen #1**

VCCX2 Cnfg ID: 0001  
Sensor Scaling  
Fahrenheit  
Use < or > To Change

- Fahrenheit
- Celsius

Check one of the boxes above. Default is "Fahrenheit".

**Configuration Screen #2**

VCCX2 Cnfg ID: 0001  
RSM#1 Installed: NO  
RSM#2 Installed: NO  
Use < or > To Change

- |                              |                              |
|------------------------------|------------------------------|
| RSM#1                        | RSM#2                        |
| <input type="checkbox"/> NO  | <input type="checkbox"/> NO  |
| <input type="checkbox"/> YES | <input type="checkbox"/> YES |

Check one of the boxes above. Default is "NO".

**Configuration Screen #3**

VCCX2 Cnfg ID: 0001  
RSM#3 Installed: NO  
RSM#4 Installed: NO  
Use < or > To Change

- |                              |                              |
|------------------------------|------------------------------|
| RSM#3                        | RSM#4                        |
| <input type="checkbox"/> NO  | <input type="checkbox"/> NO  |
| <input type="checkbox"/> YES | <input type="checkbox"/> YES |

Check one of the boxes for each category above. Default is "NO".

**Configuration Screen #4**

VCCX2 Cnfg ID: 0001  
RSMSD Installed: NO  
RSM Type: VFD  
Use < or > To Change

- |                              |                                  |
|------------------------------|----------------------------------|
| RSMSD                        | RSM TYPE                         |
| <input type="checkbox"/> NO  | <input type="checkbox"/> VFD     |
| <input type="checkbox"/> YES | <input type="checkbox"/> DIGITAL |

Check one of the boxes for each category above. Defaults are "NO" and "VFD".

**Configuration Screen #5**

VCCX2 Cnfg ID: 0001  
EM1 Installed: NO  
12RLY Install: NO  
Use < or > To Change

- |                              |                              |
|------------------------------|------------------------------|
| EM1                          | 12 RLY                       |
| <input type="checkbox"/> NO  | <input type="checkbox"/> NO  |
| <input type="checkbox"/> YES | <input type="checkbox"/> YES |

Check one of the boxes above for each selection. Defaults are "NO".

**Configuration Screen #6**

VCCX2 Cnfg ID: 0001  
MHGRV Installed: NO  
EXP Installed: NO  
Use < or > To Change

- |                              |                              |
|------------------------------|------------------------------|
| MHGRV                        | EXP                          |
| <input type="checkbox"/> NO  | <input type="checkbox"/> NO  |
| <input type="checkbox"/> YES | <input type="checkbox"/> YES |

Check one of the boxes for each category above. Defaults are "NO".

**Configuration Screen #7**

VCCX2 Cnfg ID: 0001  
MODGS Installed: NO  
XWR#2 Installed: NO  
Use < or > To Change

- |                              |                              |
|------------------------------|------------------------------|
| MODGAS                       | XWR#2                        |
| <input type="checkbox"/> NO  | <input type="checkbox"/> NO  |
| <input type="checkbox"/> YES | <input type="checkbox"/> YES |

Check one of the boxes for each category above. Defaults are "NO".

**Configuration Screen #8**

VCCX2 Cnfg ID: 0001  
Preheat-X  
Installed: NO  
Use < or > To Change

- NO
- YES

Check one of the boxes above. Default is "NO".

**Configuration Screen #9**

VCCX2 Cnfg ID: 0001  
HVAC Source  
Supply Air  
Use < or > To Change

- Supply Air
- Supply Air/Tempering
- Outdoor Air
- Return Air
- Space Temperature
- Space Temperature with High % OA
- Single Zone VAV

Check one of the boxes above. Default is "Supply Air".

**Configuration Screen #10**

VCCX2 Cnfg ID: 0001  
HVAC Mode Set By  
Remote Contact: NO  
Use < or > To Change

- NO
- YES

Check one of the boxes above. Default is "NO".

**Configuration Screen #11**

VCCX2 Cnfg ID: 0001  
SAT Reset Source  
No Reset  
Use < or > To Change

- No Reset
- Space Temperature
- Outdoor Temperature
- Return Air Temperature
- Fan VFD Signal
- Remote Voltage

Check one of the boxes above. Default is "No Reset".

**Configuration Screen #12**

VCCX2 Cnfg ID: 0001  
Reset Interval  
Rate: 30 s  
[1 - 255 Seconds]

Enter 1 to 255 seconds above. Default is "30 Seconds".

**Configuration Screen #13**

VCCX2 Cnfg ID: 0001  
Space Sensor Type  
None  
Use < or > To Change

- None
- Analog
- E-BUS Temp/ RH
- Receive Broadcast
- Remote Sensor
- Use BACnet Temp/RH

Check one of the boxes above. Default is "None".

**Configuration Screen #14**

VCCX2 Cnfg ID: 0001  
Read Space RH  
Broadcast: NO  
Use < or > To Change

- YES
- NO

Check one of the boxes above. Default is "NO".

**Configuration Screen #15**

VCCX2 Cnfg ID: 0001  
Remote Space Sensor  
Board Address: 0

Enter the address. Default is "0".

**Configuration Screen #16**

VCCX2 Cnfg ID: 0001  
E-BUS SPC/RH Sensor  
Enable Alarm LED

- Enable Alarm LED
- Disable Alarm LED

Check one of the boxes above. Default is "Enable Alarm LED".

**Configuration Screen #17**

VCCX2 Cnfg ID: 0001  
Outdoor Sensor Type  
None  
Use < or > To Change

- None
- Analog
- E-BUS OAT/ RH
- Receive Broadcast
- Use BACnet OAT/RH

Check one of the boxes above. Default is "None".

**Configuration Screen #18**

VCCX2 Cnfg ID: 0001  
Return Sensor Type  
NONE  
Use < or > To Change

- None
- Analog
- E-BUS Temp/RH

Check one of the boxes above. Default is "NONE".

**Configuration Screen #19**

VCCX2 Cnfg ID: 0001  
Static Pr Control  
Fan VFD / SZ VAV  
Use < or > To Change

- None
- Fan VFD / SZ VAV
- Bypass Damper

Check one of the boxes above. Default is "Fan VFD / SZ VAV".

**Configuration Screen #20**

VCCX2 Cnfg ID: 0001  
Static/Fan Control  
Rate: 10 s  
[ 1 – 30 Seconds ]

Enter 1 to 30 seconds above. Default is "10 seconds".

**Configuration Screen #21**

VCCX2 Cnfg ID: 0001  
Static Pr Control  
Max Adjust: 5%  
[ 1 – 30% ]

Enter 1 to 30 percent above. Default is "5 percent".

**Configuration Screen #22**

VCCX2 Cnfg ID: 0001  
Fan Voltage Output  
Min Volts: 0.0 VDC  
Max Volts: 10.0 VDC

In the first box, enter 0 to 10. Default is "0 Volts". In the second box, enter 0 to 10. Default is "10 Volts."

**Configuration Screen #23**

VCCX2 Cnfg ID: 0001  
Fan Cycle Mode  
NO  
Use < or > To Change

- NO
- YES

Check one of the boxes above. Default is "NO".

**Configuration Screen #24**

VCCX2 Cnfg ID: 0001  
Fan Runs During  
Unoccupied: NO  
Use < or > To Change

- NO
- YES

Check one of the boxes above. Default is "NO".

**Configuration Screen #25**

VCCX2 Cnfg ID: 0001  
Supply Fan Proving  
NO  
Use < or > To Change

- NO
- YES

Check one of the boxes above. Default is "NO".

**Configuration Screen #26**

VCCX2 Cnfg ID: 0001  
Return Fan Proving  
No Return Fan POF  
Use < or > To Change

- No Return Fan POF
- Return/Exhaust POF
- Return POF w/Supply Fan On

Check one of the boxes above. Default is "No Return Fan POF".

**Configuration Screen #27**

VCCX2 Cnfg ID: 0001  
Fan Starting  
Delay: -1 s  
[ -1 = Unit Addr x 5 ]

Enter -1 to 240 seconds above. Default is "-1 seconds". -1 = multiply controller address by 5 seconds.

**Configuration Screen #28**

VCCX2 Cnfg ID: 0001  
Purge Mode  
Delay: 30 s  
[ 0 - 900 Seconds ]

Enter 0 to 900 seconds above. Default is "30 seconds".

**Configuration Screen #29**

VCCX2 Cnfg ID: 0001  
Heat Type  
No Heat  
Use < or > To Change

- No Heat
- Staged Only
- Mod Heat Only
- Modgas-x Then Staged
- Mod Heat Then Staged

Check one of the boxes above. Default is "No Heat".

**Configuration Screen #30**

VCCX2 Cnfg ID: 0001  
Mod Heat Volt Output  
Min Pos Volts: 0.0  
Max Pos Volts: 10.0

In the first box, enter 0 to 10. Default is "0 Volts". In the second box, enter 0 to 10. Default is "10 Volts."

**Configuration Screen #31**

VCCX2 Cnfg ID: 0001  
Cool Type  
Refrigeration Module  
Use < or > To Change

- Refrigeration Module
- Staged Only
- Mod Only

Check one of the boxes above. Default is "Refrigeration Module".

**Configuration Screen #32**

VCCX2 Cnfg ID: 0001  
Chilled Water Valve  
0-10VDC  
Use < or > To Change

- 0-10 VDC
- 2-10 VDC

Check one of the boxes above. Default is "0-10 VDC".

**Configuration Screen #33**

VCCX2 Cnfg ID: 0001  
Chilled Water Valve  
Direct Acting  
Use < or > To Change

- Direct Acting
- Reverse Acting

Check one of the boxes above. Default is "Direct Acting".

**Configuration Screen #34**

VCCX2 Cnfg ID: 0001  
Mech Heat/Cool  
Alarm Delay: 15 Min

Enter 0 to 240 minutes above. Default is "15 Minutes".

**Configuration Screen #35**

VCCX2 Cnfg ID: 0001  
Econo Control Type  
No Economizer  
Use < or > To Change

- No Economizer
- Standard Economizer
- IAQ Economizer (Economizer with CO<sub>2</sub> Override)

Check one of the boxes above. Default is "No Economizer".

**Configuration Screen #36**

VCCX2 Cnfg ID: 0001  
Title 24  
Economizer: NO  
Use < or > To Change

- NO
- YES

Check one of the boxes above. Default is "NO".

**Configuration Screen #37**

VCCX2 Cnfg ID: 0001  
Econo Control In  
Unoc Mode: NO  
Use < or > To Change

- NO
- YES

Check one of the boxes above. Default is "NO".

**Configuration Screen #38**

VCCX2 Cnfg ID: 0001  
 Econo Enable Source  
 Drybulb  
 Use < or > To Change

- Drybulb
  - Wetbulb (OA RH Sensor needed)
  - Dewpoint (OA RH Sensor needed)
  - Comparative Enthalpy (E-BUS OA RH & E-BUS RA RH Sensors needed)
- Check one of the boxes above. Default is "Drybulb".

**Configuration Screen #39**

VCCX2 Cnfg ID: 0001  
 Economizer Control  
 Rate: 10 s  
 Prop Window: 10.0°F

In the first box, enter 1 to 30. Default is "10 seconds". In the second box, enter 1.0 to 30.0. Default is "10.0."

**Configuration Screen #40**

VCCX2 Cnfg ID: 0001  
 Econo Voltage Output  
 Min Volts: 2.0 VDC  
 Max Volts: 10.0 VDC

In the first box, enter 0 to 10. Default is "2 VDC". In the second box, enter 0 to 10. Default is "10 VDC."

**Configuration Screen #41**

VCCX2 Cnfg ID: 0001  
 Econo Relay On When  
 Econo Above Min Pos  
 Use < or > To Change

- Econo Above Min Pos
  - Above Activation %
- Check one of the boxes above. Default is "Econo Above Min Pos".

**Configuration Screen #42**

VCCX2 Cnfg ID: 0001  
 Economizer Relay  
 Activation Level  
 Setpoint: 15%

In the box, enter 0 to 100. Default is "15 percent".

**Configuration Screen #43**

VCCX2 Cnfg ID: 0001  
 Ht Wheel Enabled By  
 Econo at Min Pos  
 Use < or > To Change

- Econo at Min Pos
  - OA Enthalpy
- Check one of the boxes above. Default is "Econo at Min Pos".

**Configuration Screen #44**

VCCX2 Cnfg ID: 0001  
 CO2 Sensor Installed  
 None  
 Use < or > To Change

- None
  - E-Bus CO2
  - Receive Broadcast
  - Future Use
  - Use BACnet CO2
- Check one of the boxes above. Default is "None".

**Configuration Screen #45**

VCCX2 Cnfg ID: 0001  
 Building Pr. Sensor  
 None  
 Use < or > To Change

- None
  - Analog
  - Receive Broadcast
  - Use BACnet Reading
- Check one of the boxes above. Default is "None".

**Configuration Screen #46**

VCCX2 Cnfg ID: 0001  
 Building Pr. Control  
 None  
 Use < or > To Change

- None
  - On/Off Exhaust Relay
  - Modulating Exhaust
  - Outdoor Air Damper
  - Supply Fan
  - Duct Static Control
- Check one of the boxes above. Default is "None".

**Configuration Screen #47**

VCCX2 Cnfg ID: 0001  
 Building Pr. Control  
 Rate: 10 Sec  
 [ 1 – 30 Seconds ]

Enter 1 to 30 seconds. Default is "10 seconds".

**Configuration Screen #48**

VCCX2 Cnfg ID: 0001  
 Building Pr. Control  
 Max Adjust: 5%  
 [ 1 – 30% ]

Enter 1 to 30. Default is "5 percent".

**Configuration Screen #49**

VCCX2 Cnfg ID: 0001  
Exh Fan Volts  
Min Volts: 0.0 VDC  
Max Volts: 10.0 VDC

In the first box, enter 0 to 10. Default is "0 VDC". In the second box, enter 0 to 10. Default is "10 VDC."

**Configuration Screen #50**

VCCX2 Cnfg ID: 0001  
Heat Pump Config  
No Heat Pump  
Use < or > To Change

- No Heat Pump
- Air/Air Fail to Heat
- Air/Air Fail to Cool
- WSHP Fail to Heat
- WSHP Fail to Cool
- Waterside Condenser

Check one of the boxes above. Default is "No Heat Pump".

**Configuration Screen #51**

VCCX2 Cnfg ID: 0001  
WSHP Glycol  
Percentage: 0%  
Use < or > To Change

Enter 0-40 in increments of 5. Default is "0%".

**Configuration Screen #52**

VCCX2 Cnfg ID: 0001  
Aux Heat Type  
No Aux Heat  
Use < or > To Change

- No Aux Heat
- Staged Only
- Mod Heat Only
- Modgas-x Then Staged
- Mod Heat Then Staged

Check one of the boxes above. Default is "No Aux Heat".

**Configuration Screen #53**

VCCX2 Cnfg ID: 0001  
Dehum. Control  
None  
Use < or > To Change

- None
- Only Occupied Vent
- Only Vent Anytime
- All Modes Occupied
- All Modes Anytime

Check one of the boxes above. Default is "None".

**Configuration Screen #54**

VCCX2 Cnfg ID: 0001  
Humidity Control  
Sensor: Space  
Use < or > To Change

- Space
- Return

Check one of the boxes above. Default is "Space".

**Configuration Screen #55**

VCCX2 Cnfg ID: 0001  
Reheat Control  
None  
Use < or > To Change

- None
- On/Off HGR Relay
- Modulating HGR
- Unit Heat
- Mod HGR + Unit Heat
- On/Off HGR + Unit Heat
- Mod HGR + Aux Heat

Check one of the boxes above. Default is "None".

**Configuration Screen #56**

VCCX2 Cnfg ID: 0001  
Airflow  
Station: Paragon  
Use < or > To Change

- Paragon
- Ebtron

Check one of the boxes above. Default is "Paragon".

**Configuration Screen #57**

VCCX2 Cnfg ID: 0001  
Monitor OA Airflow  
NO  
Use < or > To Change

- NO
- YES

Check one of the boxes above. Default is "NO".

**Configuration Screen #58**

VCCX2 Cnfg ID: 0001  
Control Outdoor Air  
CFM w/Damper: NO  
Use < or > To Change

- NO
- YES

Check one of the boxes above. Default is "NO".

**Configuration Screen #59**

VCCX2 Cnfg ID: 0001  
Control Outdoor Air  
CFM w/VFD: NO  
Use < or > To Change

- NO
- YES

Check one of the boxes above. Default is "NO".

**Configuration Screen #60**

VCCX2 Cnfg ID: 0001  
Outdoor Airflow Duct  
Size: 0.00  
[ In Square Feet ]

Enter the inside area in sq. ft. of the OA duct/damper, accurate to two decimal places. Range is 0-200. Default is "0".

**Configuration Screen #61**

VCCX2 Cnfg ID: 0001

## VCCX2 Configuration Worksheet

Relays #2 through #24 can be individually configured. By using the 7 relay outputs available on the VCCX2 Controller the 5 relays on the VCC-X EM1 Expansion Module, and the 12 Relays on the 12 Relay E-BUS Expansion Module, you have the ability to configure up to a combined total of 24 Heating Stages, Cooling Stages, and the other options listed above. Only the Heating and Cooling relays can be configured with multiple outputs. If any other option is selected more than once, it will simply activate redundant relays but no multiple staging will occur.

 Low Alarm Offset  
 Setpoint: 30.0°F

  

In the boxes above enter a value from 0 to 50. The default value is “30”. Only applies to Space, Return Air, or Single Zone VAV controlled units.

**Setpoint Screen #12**

VCCX2 Spts ID: 0001  
 Outdoor Dewpoint  
 Setpoint: 55.0°F

In the box above enter a value from 35 to 80. The default value is “55”.

**Setpoint Screen #13**

VCCX2 Spts ID: 0001  
 Indoor RH Setpt  
 Disable/Lo Rst: 50%  
 Enable/Hi Rst: 60%

  

In the first box above enter a value from 0 to 100. The default value is “50”. In the second box above enter a value from 0 to 100. The default value is “60”.  
 This screen can be used to set the Indoor (Space or Return Air) Dehumidification Enable and Disable Setpoints and to set the Indoor Humidity Reset Range used to reset the Coil Suction (Saturation) Temperature Setpoint during Dehumidification. Please see the instructions for *Setpoint Screen #13* in the *VCCX2 Controller Operator Interfaces SD Technical Guide* for detailed information.

**Setpoint Screen #14**

VCCX2 Spts ID: 0001  
Coil Temp Setpt  
Hi Rst Lmt: 45°F  
Lo Rst Lmt: 40°F

  

In the first box enter a value from 35 to 70. The default value is “45”. In the second box enter a value from 35 to 70. The default value is “40”. During Dehumidification, the Coil temperature can be reset within the range created on this screen per the description for *Setpoint Screen #13*. If no reset is desired, set both the low and high setpoints to the same value.

**Setpoint Screen #15**

VCCX2 Spts ID: 0001  
Static Pressure  
Setpt: 1.50”WG  
Deadband: 0.10”WG

  

In the first box above enter a value from .10 to 3.0. The default value is “1.5”. In the second box above enter a value from .01 to 0.5. The default value is “.10”.

**Setpoint Screen #16**

VCCX2 Spts ID: 0001  
Static Pressure Reset  
Max Limit: 1.50”WG  
Min Limit: 1.50”WG

  

In the first box above enter a value from .10 to 3.0. The default value is “1.5”. In the second box above enter a value from .10 to 3.0. The default value is “1.5”.

**Setpoint Screen #17**

VCCX2 Spts ID: 0001  
Static Pressure Reset  
Interval: 15Min

Enter a value from 10 to 60. The default value is “15”.

**Setpoint Screen #18**

VCCX2 Spts ID: 0001  
VFD Speed Limits  
Min Cool: 30%  
Min Vent: 20%

  

In the first box above enter a value from 0 to 100. The default value is “30”. In the second box above enter a value from 0 to 100. The default value is “20”. If this unit is configured for Single Zone VAV operation, the Min Cool Percentage will be the fan speed at which the VFD will start operating at when cooling is initiated. It can then modulate up to 100% as the space temperature rises within the range created by the Cool Low Reset Source and the Cool High Reset Source Setpoints entered in *Setpoint Screen #21*. If this is a CAV or MUA unit, this should be set to 100%.

The Min Vent Percentage is the speed at which the fan will operate at during the Vent Mode.

**Setpoint Screen #19**

VCCX2 Spts ID: 0001  
VFD Speed Limits  
Min Heat: 50%  
Max Heat: 100%

  

In the first box above enter a value from 0 to 100. The default value is “50”. In the second box above enter a value from 0 to 100. The default value is “100”. If this unit is configured for Single Zone VAV operation, and you have a modulating heat source that will allow VAV heating, then the Min Heat Percentage will be the fan speed at

which the VFD will start operating at when heating is initiated. It can then modulate up to the Max Heat Percentage as the Space Temperature falls within the range created by the Heat High Reset Source and the Heat Low Reset Source created in *Setpoint Screen #23*. On a standard VAV unit, if the VFD Signal falls below the Minimum VFD Heat Setpoint during the Heating Mode, Heating will be disabled. If this is a CAV, MUA, or Single Zone VAV with CAV Heating, these setpoints should both be set at the same value which represents the constant speed you want the fan to operate at during the Heating Mode.

**Setpoint Screen #20**

VCCX2 Spts ID: 0001  
Supply Air Cooling  
Setpoint: 55.0°F  
Hi Rst Limit: 55.0°F

  

If no Reset Source has been configured in *Configuration Screen #11*, then this Setpoint will be the SAT Cooling Setpoint. Line 4 will be blank. If a Reset Source has been configured in *Configuration Screen #11*, then Line 4 will read Hi Rst Limit.

In the first box above enter a value from 30 to 80. The default value is “55”. In the second box above enter a value from 0 to 100. The default value is “55”.

**Setpoint Screen #21**

VCCX2 Spts ID: 0001  
Cool Rst Source Spts  
High Reset: 75.0°F  
Low Reset: 70.0°F

  

If no SAT Reset Source has been configured in *Configuration Screen #11*, you can disregard this screen.

If a SAT Reset has been configured, please see the instructions for *Setpoint Screen #21* in the *VCCX2 Controller Operator Interfaces SD Technical Guide* for detailed information.

In the first box above enter a value from 0 to 150. The default value is “75”. In the second box above enter a value from -30 to 150. The default value is “70”.

**Setpoint Screen #22**

VCCX2 Spts ID: 0001  
Supply Air Heating  
Setpoint: 120.0°F  
Hi Rst Limit: 120.0°F

  

If no Reset Source has been configured in *Configuration Screen #11*, then this Setpoint will be the SAT Heating Setpoint. Line 4 will be blank. If a Reset Source has been configured in *Configuration Screen #11*, then Line 4 will read Rst Limit.

In the first box above enter a value from 40 to 240. The default value is “120”. In the second box above enter a value from 0 to 250. The default value is “120”.

**Setpoint Screen #23**

VCCX2 Spts ID: 0001  
Heat Rst Source Spts  
High Reset: 75.0°F
